

Please do not allow Bellsouth to set this extremely dangerous precedent. I find it to be the height of hubris that Bellsouth feels that it has the right to deny any competition in their market no matter how small. The implications of this petition for small ISP's across the nation are grave, I am extremely concerned that if majority ISP's are allowed to completely monopolize DSL service simply because they are the majority that customers will be the losers.

As a customer of a small ISP here in California I've been extremely happy with their service after moving over from a large, non-responsive, extremely bureaucratic ISP and I would hate to see them squashed, just to make the majority ISP's life easier.

So please deny the Bellsouth petition and allow customers to have choices in their ISP service.

Thank You,
Juan Lee
